

ACTIVE HUNTING

Blaser

PASSIONATE

about hunting

Blaser

Passion for the hunt provides an infinite source of energy. It sharpens our senses and improves our performance, allowing us to be at one with nature and experience all it has to offer. We sense the wild and react instinctively, confident in both our ability and Blaser technology.

Perfecting the functionality and skilled use of the rifle is the foundation for successful hunting. As the embodiment of practical active hunting, Blaser hunting rifles are the focus of our passion.

VISION

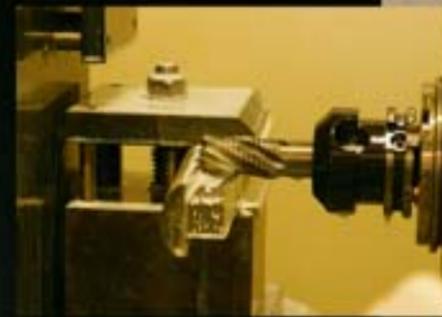

The manufacture of hunting rifles is a fascinating endeavor that combines the glory of nature with a desire to advance technology.

It is our passion. Everyone who works at Blaser, from development and production to sales and administration, is fully committed to equipping hunters with the very best.

Ideas for new developments come from our own hunting experiences. Our network of skilled professionals, technology experts and sales people then spread this innovation around the globe.

A smooth operation requires more than well thought-out process management and brilliant programming. Good teamwork and a strong individual commitment toward the common goal are essential. This defines the way we work both inhouse and with our partners. A shared passion and vision, the fun of swapping stories and working together as a team are what drives Blaser's success.

HUNTING QUALITY

Being in awe of creatures and understanding the principles of hunting are core values that span generations and remain significant today.

What does change over time are the conditions and motives for hunting. The preservation of flora and fauna is becoming a priority in our cultural environment. Game is also widely regarded as high-quality food, which directly impacts our health and quality of life. As hunters, we help to maintain a healthy game population and a large number of species. This makes hunting even more important today than ever before.

WHY WE HUNT

Many psychologists agree that a fulfilled existence stems from our primeval genetic inheritance, and hunting is a fundamental component of this legacy. Indeed, it guaranteed human survival for a long time. By permitting hunting, we are preserving something natural and giving ourselves the opportunity to be at one with nature, something deeply rooted in us all.

The making of hunting rifles and evolution of active hunting are inextricably linked. As a manufacturer of state-of-the-art weaponry, we are partly responsible for shaping modern-day hunting.

Through technology, we offer hunters security, scope for physical activity and abundant opportunity to develop their passion. By designing every inch of our rifles for maximum accuracy, we are doing our utmost to contribute to successful and professional hunting.

All Blaser hunting rifles promote sustainable and exciting hunting by optimizing five design criteria:

- SAFETY
- ACCURACY
- RELIABILITY
- HUNTABILITY
- VERSATILITY

SAFETY

above all else

Passion and safety go hand-in-hand when hunting. Careful handling of the rifle is vital and must be second nature to any hunter. Equally important is choosing the right firearm technology.

Self-cocking hunting rifles that are carried loaded and cocked are always a risk. There is a chance the rifle could fall from the raised stand or the hunter could slip on ice while stalking game.

When hunting with a loaded weapon, only an uncocked lock offers maximum safety. With this in mind, all our guns are equipped with the Blaser manual cocking system that is activated just before the shot is fired.

This innovation offers the best of both worlds – uncompromising safety and readiness to fire – and has been a Blaser success story for over 40 years.

“Whether I’m walking to the raised stand, stalking game or on a driven hunt, I always feel safe because Blaser rifles can be carried uncocked. If I need them in a hurry, however, they are quick and reliable. This is one of the reasons why I have been loyal to Blaser for years.”

Klaus Fischer,
Proprietor,
Fischer Group of Companies

Blaser manual cocking system

Immediately prior to firing a shot, the firing pin spring is cocked by pushing the safety slide forward. This movement is virtually silent and will not alert game to your presence. If no shot is fired, simply return the safety slide to its original position for maximum safety.

No set trigger

If a rifle is cocked and set, the slightest lack of concentration can mean grave danger. Blaser’s direct triggers are preferred by competition shooters around the world, as they permit controlled contact between the finger and trigger and make the set trigger superfluous.

ACCURACY

is everything

Preserving the traditional art of hunting should not deter us from improving technology wherever possible. After all, a hunter's most important ethical obligation is to hit the target, and doing everything in their power to do so is a sign of respect for the wild.

International success allows us to be meticulous in our rifle development and work towards perfecting accuracy.

In addition to keeping current with the latest findings, we invest considerable time and money into research, prototypes and testing.

Our developments in barrel, lock and trigger technology enable today's proficient hunters to shoot much more precisely than their forefathers.

World class: Blaser direct triggers

Blaser's direct triggers are legendary throughout the world. Renowned for being the best contribution to an expert shot, they make set triggers an unnecessary risk factor.

Barrel accuracy

Blaser rifle barrels and chambers are cold-hammered in one step to avoid tolerances. Only extremely hard and tempered quality steels are used.

Free barrel movement

All Blaser barrels are free-floating. Combined calibers can be adjusted to each other. This guarantees that even the slug is on target.

The locking system: wisdom incarnate

When it comes to accuracy, lock construction is just as important as barrel quality. Maximum stability and an extremely large locking surface characterize every Blaser locking system.

Original Blaser saddle mount

The tension-free assembly directly above the chamber does not affect the swinging of the barrels, and ensures that the strength and repeating accuracy of the saddle mount are unsurpassed.

"In just one season in Pakistan, I shot all three types of sheep that may be hunted – two at over 400 meters and one at about 300 meters – using my Blaser R 93 .257 caliber Weatherby Magnum. I also took a Himalayan ibex at 350 meters with my Blaser. The R 93 never lets me down despite inclement weather, frequent takedown and everything else it endures when traveling with me."

Béla Hidvégi,
Author of hunting books, Budapest

RELIABILITY

faith in your gun

Everything we do, from technical design to material selection and workmanship, is aimed at giving hunters complete faith in their firearm. Even under the toughest conditions!

Wet weather, fluctuating temperatures, high shot frequency, rough handling and repeated takedown are typical of active hunting. Our rifles are designed to meet these extreme and challenging conditions over a long service life.

Every new development must pass a series of exceedingly tough tests before it is included in the range.

Professional hunters all over the world subject our rifles to endurance testing. Likewise, every rifle we produce is checked for perfect function as part of a seamless quality control system.

"With temperature differences of 100° Celsius (ranging from -60° to +40°), human beings are pushed to the very limit of their endurance. There can be no compromise in terms of material and equipment: the very best is just about good enough. As someone who hunts and films animals, I spend months at a time in the wild. My R 93 is the difference between life and death. It hasn't let me down yet."

Robust action and barrel finish

We anodize the surface of the action and nitrate the barrels, using an environmentally friendly procedure, to provide maximum protection against corrosion and damage.

Consistent performance

Blaser hunting rifles are designed to guarantee reliable function and accuracy. Extreme temperatures and wet weather are merely variables that we factor in.

Easy to clean

All Blaser rifles can be taken down quickly and easily, making the removal of tough dirt a breeze.

In a word:

HUNTABILITY

Perfectly weighted and balanced

The weight of every rifle is distributed evenly to optimize performance. A full range of barrel and gunstock options allow hunters to fine tune the rifle to their individual needs.

Compact design

All Blaser rifles are designed to be as compact as possible so that they will be undetected and easy to maneuver in dense vegetation, difficult terrain and on narrow raised stands. Optional short barrels further increase freedom of movement.

Fluent shape and operation

All Blaser rifles share the same handling features. Once you have mastered the basics, it is easy to become proficient with any model. The ergonomic gunstock shape, superior trigger function and other advanced features culminate in skillful shooting.

Active hunting tests both the body and mind. The combination of physical exertion and mental concentration is like no other. Likewise, being at one with nature and having to rely on instinct and ability is empowering for the soul.

Nothing should interfere with the dynamics of hunting. Your rifle should be comfortable to carry, and must be balanced, motionless and in tune with the body when aiming. Movements and actions must be intuitive, especially when it matters. Only then the rifle is truly "hunnable".

Comfort, freedom of movement and many other attributes – from ergonomics to practicality – are quintessential to every Blaser rifle.

"As a professional hunter in South Africa, confrontation with dangerous game is an everyday occurrence. Faith in your firearm is important, as is its safe, easy operation, which should be second nature. I was very impressed the first time I came across the Blaser double rifle: it was perfectly balanced, easy to handle, safe and an excellent shot. What more could a hunter want?"

Karl Dedekind,
Dedekind Safaris,
Pongola, South Africa

VERSATILITY

the freedom of hunting

New hunting environments. Changing requirements. Flexibility to meet new challenges. Customizing a favorite rifle to a unique style. While not all hunters are this demanding, with Blaser they can always get exactly what they want and need.

Modern-day transportation has not only broadened our horizons, it has transformed the way we live and hunt. Even those who prefer to stay close to home rather than travel abroad move about a lot. Recognizing this trend over twenty years ago, Blaser produced a modular line of rifles that could be specialized in a variety of ways, easily taken down and transported.

Hunters who carry a Blaser rifle are always confident of how it operates, aims and shoots, even under unfamiliar conditions. This assurance makes any hunting opportunity a successful one.

Whether you are pragmatic or emotional, daring or unadventurous, informal or traditional, we will custom design and equip a rifle to suit your specific requirements.

There is a Blaser to suit everyone.

"After getting my Blaser as a birthday present I have hunted a Grizzly in British Columbia, taken six outstanding trophies in Zimbabwe, and finished the year in Northern New Mexico with a marvelous bull elk. The flexibility of the multiple barrels

and the breakdown capability of the R 93 gave me the ability to hunt with one rifle. Eleven months, 21,000 air miles, running river rapids in Canada, weeks of tough stalking in Zim and a blinding blizzard at 10,000 feet along the Colorado border and my Blaser worked perfectly. This year I am getting a safari grade forearm and a .416. In 2004 my rifle and I go back to Africa for Simba and the Dugga Boys!"

Sandra Summers
Santa Fe, New Mexico

Barrel exchange and caliber selection
A standard rifle can be adapted to suit the most challenging requirements simply by exchanging barrels or choosing a different caliber. With over and under guns, the barrel combination permits both a change of caliber and rifle type. For example, a drilling can be made into a double rifle drilling, and an over and under shotgun rifle can become a Bergstutzen.

Takedown and storage
Blaser rifles can be dismantled and reassembled very quickly. A shifting of the point of impact is not an issue once the rifle has been adjusted properly. Our carrying cases are elegant and very popular. Your rifle will be fully protected and virtually inconspicuous in the compact shell.

Changing the rifle scope
The Blaser saddle mount was the first to offer a straightforward and convenient change of optics. Using several riflescopes or aiming devices on one rifle has never been easier. Optics can be changed any time to suit any type of hunting. Once professionally adjusted, the scope can be removed and replaced in seconds as often as required.

Infinite choice
Blaser offers rifles for all hunting styles and requirements. Product lines run the gamut from the lightweight single shot to the bolt action rifle, and from the versatile over and under and side by side guns to the drilling. In particular, the R 93 bolt action rifle range offers exceptional choice, including a synthetic gunstock for harsh conditions and a special barrel for safaris.

SINGLE SHOT RIFLE

K 95

Hunting is as much about the ambitious pursuit of a target as it is about a successful outcome. The Blaser single shot rifle is a hunting firearm in the truest sense.

On target

The physical intensity of stalking an animal combined with the mental strength required to watch and wait for exactly the right moment is what makes the hunt so exciting. If encountering wild animals were a matter of course, then hunting them would lose its appeal. Hunting requires time, perseverance and the ability to put oneself in the position of the wild animal and be in tune with its superior instincts. True hunting will guarantee tension but not the outcome of the hunt. The Blaser single shot rifle embodies this philosophy. Lightweight and compact, it is comfortable to carry either over the shoulder or in a rucksack. Loaded with just one cartridge, the K 95 is always ready to shoot quickly and finish the hunt with 100% reliability and precision accuracy. Even just stalking with the K 95 is an experience in itself.

Blaser

Brilliant yet simple solutions

BASIC MODEL

K 95

Safe

The K 95 is only cocked just before shooting. If no shot is fired, returning the safety slide to its original position ensures maximum safety. To protect the K 95 from unauthorized use, the locking block can be removed in a few easy steps.

Accurate

The accuracy of the Blaser single shot rifle is legendary. Playing a vital role is the tilting block locking system as well as the fine direct trigger, which is impressive in any situation.

Reliable

It's easy to forget that such a graceful rifle packs so much power. The tilting block locking system may be compact but it is designed for maximum gas pressure, offering reliable performance even under tremendous strain. The velvety finish of the barrel and action protects against corrosion and damage.

Hunable

The K 95 is the most lightweight and sleekest of all Blaser hunting rifles. It is comfortable and unobtrusive to carry and transport, either over the shoulder or taken down. It is also fast and easy to assemble, and can be ready to shoot in a matter of seconds.

Versatile

The K 95 is the rifle of choice for physically demanding hunts and can be used for all game. The interchangeable barrels are available in every popular caliber. Once professionally adjusted, every barrel will be on target instantly after insertion.

The Blaser K 95 single shot rifle has ruled under tough hunting conditions for over 25 years and continues to embody the archetypal hunt: Active stalking in a vast area.

The ergonomic shape and compact design offer an advantage, both in familiar and unfamiliar territories. A shortened version, the K 95 Stutzen, is one of the most compact hunting rifles in the world. It performs expertly in the mountains and in stands that are small and high.

*K 95 Stutzen Luxus
with optional extras;
octagonal barrel is
standard.*

*K 95 Luxus
with optional extras*

Enhanced by beauty

Slender elegance shapes the K 95, giving it a unique appearance. A quiet charm invites closer inspection. Delicate engraving and highly intricate design work enhances its powerful appeal.

The result is the Baronesse.

Beautifully elongated action side plates make a great canvas for fine ornamentation and depictions of game, and the wide range of attractive engravings makes it easy to choose a motif. The octagonal barrel accentuates its sleek silhouette, and graceful features such as the black forearm tip and gold-colored titanium-nitrated trigger enhance its individuality.

BARONESSE

BOLT ACTION RIFLES

R 93

Not only is hunting an individual sport, but every hunter is completely unique, their instincts and decisions both highly personal.

The only common denominator: the R 93 bolt action rifle.

Endless spaces

Our vision to tailor a hunting rifle specifically for modern hunting was groundbreaking. From this revolutionary idea came a family of bolt action rifles able to meet every conceivable requirement. Today, the R 93 is recognized worldwide as the most successful hunting rifle system of the 20th century.

It is straight, smooth and lightning-fast when repeating, and has all Blaser's advanced safety features. The combination improves both the dynamics and success of the hunt. The locking system of the R 93 bolts in a straight line without rotational movement in the barrel, giving it an edge when it comes to accuracy. The R 93 also raises the bar on basic features common to all Blaser rifles, making it a highly resilient and adaptable weapon with virtually boundless potential.

Blaser

Success through innovation

BASIC MODEL

R 93

The invention of the R 93 straight-pull bolt action was nothing short of a revolution. When repeating, the lock pulls back and pushes forward in a straight line. There is no rotation of the bolt handle upwards or downwards.

The R 93 minimizes body movement during repeating. It is also faster than conventional actions, allowing more time to aim and re-aim for subsequent shots. This is a particular advantage on drive and big game hunts.

The R 93 bolt locks directly in the barrel. The entire firearm is renowned for its accuracy and resilience. All components, from the barrel and finish to the trigger and scope mount, are extremely robust and designed for the long haul.

R 93 Luxus
with optional extras

Safe

The R 93 is carried uncocked, completely protected against unintentional release. It is readied for shooting by pushing the cocking slide forwards. The accurate direct trigger makes the set trigger an unnecessary risk factor. The entire procedure quickly becomes second nature.

Accurate

The barrel is mounted exclusively in the metal action and is accurate under any condition. Also fundamental to accuracy is the Blaser direct trigger. Indeed, every detail of the R 93 is designed for maximum precision.

Reliable

All lock functions are free of wear and tear to a great extent and enclosed to keep out dirt and snow. Simple takedown makes the R 93 easy to clean, even when in use. The robust barrel and action finish increases overall resistance to the elements.

Huntable

Perfect weight distribution, reduced length and a manageable shape make the R 93 safe and stable when aiming. It can also be taken down in seconds.

Versatile

Numerous caliber and barrel options allow the R 93 to be converted into a special rifle within seconds. Different gunstocks, from the Offroad to the Safari, are available for particularly challenging applications.

New agility in a traditional guise

STUTZEN

R 93

*R 93 Stutzen Luxus
with optional extras*

The R 93 Stutzen and the R 93 Octagon take a nostalgic and elegant approach to the challenges of modern-day hunting.

When it comes to seeking out thrills, many hunters would agree that active stalking in steep and densely wooded terrain is the most exciting form of hunting there is. Such surroundings require maximum mobility, making the compact Stutzen bolt action rifle an exceptional value and a tremendous advantage.

All R 93 models can optionally be equipped with an octagonal barrel.

R 93 Stutzen

The shortened length optimizes handling and manageability, the split forearm ensures consistent accuracy

and is refined with a black finish. The octagonal barrel accentuates the R 93 Stutzen's sleek profile.

*R 93 Luxus Octagon
with optional extras*

R 93 Octagon

The functional elegance of this well-balanced rifle reminiscent of the R 93 Attaché. In addition to combining all the

advantages of the Semi Weight and shorter 520 mm-barrel, the R 93 Octagon sports a visually appealing octagonal profile.

Simply sublime

ATTACHÉ

R 93

At its most basic, the R 93 is more than enough for most situations. It is our own enthusiasm for perfection that has refined and enhanced this innovative weapon.

R 93 Attaché

The fluted barrel exudes functional elegance and noticeably reduces the weight of the rifle. The bolt head is titanium-nitrated (gold-colored). At the end of the forearm is a black drop shape. Finishing the buttstock is a black, grained rubber cap.

The action is anodized in black. Wooden side plates match the beautifully grained wood stock, as does the wooden ball on the bolt handle. An elegant Blaser carrying case and leather rifle sling complete the package.

*R 93 Attaché
with optional extras*

The Attaché is a special edition of the R 93. Professional yet stylish, it is well suited to pragmatic hunters with refined taste. The distinctive wooden stock, carefully selected for its natural beauty, pairs perfectly with the black-anodized action. Indeed, the rifle is a unique synthesis of modern technology, professional mobility and timeless beauty.

The strength factor

OFFROAD

R 93

R 93 Offroad

The one-piece synthetic gunstock is shatterproof and will remain stable under temperature fluctuations, from -40° C to 80° C. There is a practical storage com-

partment in the gunstock accessed by a removable rubber cap. The gunstock measures 35.5 cm, including the cap, and can be extended according to individual needs.

R 93 Offroad
with optional extras

R 93 Offroad tracking
(Rifle sling not included)

R 93 Offroad Tracking

The R 93 Offroad model was developed specially for bloodhound handlers. The retainers positioned in different places for the swivel ring facilitate flexible mounting

of the shoulder strap for customized transport. The barrel measures 50 cm and comes with an express sight.

Wet weather, extreme temperatures, dirt and rough handling are all par for the course for Blaser rifles. Even over long periods of time, these conditions will not affect the rifle's reliable function and easy maintenance. Only the wooden stock requires diligent care.

For those wishing to hunt under difficult conditions without having to think about the gunstock, a synthetic stock is the best solution.

The R 93 Offroad amalgamates the design advantages of the R 93 with an extremely stable synthetic stock – a combination that can withstand virtually anything.

All R 93 rifles with a wooden stock, including the Attaché, Safari, Semi Weight and Match, can be equipped with an exchangeable Offroad gunstock. The new combination need only be adjusted and test-fired once. The stock can then be changed quickly and easily in all weather conditions, even out in the field.

Perfect for harsh conditions

PROFESSIONAL

R 93

The tougher the conditions for hunters and firearms, the more robust a hunting firearm must be. The R 93 Professional symbolises the Blaser philosophy: a harmonious design offering unlimited practical suitability. The technology has proven itself more than a 100,000 times all over the world and is coupled in this instance with an extremely resilient stock.

The straight comb and ergonomically optimised pistol grip with elastic inserts make it a pleasure to shoot and it secures comfortable handling and aiming whatever the weather.

The innovative stock in the colour combination dark green/anthracite is also available as a full left-handed version.

*R 93 Professional
with optional extras*

R 93 Professional

Elastic inserts in the ergonomically optimised pistol grip and the forearm area ensure secure handling even in wet weather. The Professional is available in a left-handed and a right-handed version.

Its one-piece dark green synthetic stock is shatter-proof and thermo-stable even under extreme temperatures. The length of pull measures 36.5 cm including the 1 cm rubber recoil pad. Different rubber recoil pads are optionally available.

*R 93 Professional Camo
with optional extras*

R 93 Professional Camo

The R 93 Professional Camo combines the superior features of the R 93 Professional with the ultimate in camouflage. The Mossy Oak™ design blends bark,

shadows, foliage and soil features, imitating autumn woodland perfectly and making the rifle virtually invisible from a distance.

*R 93 Professional Tracking
(Rifle sling not included)*

A focused decision

SEMI WEIGHT

R 93

Extensive testing shows that the R 93 Semi Weight consistently improves the shooters performance. Even when shooting freehand or with a support that is less than ideal, the Semi Weight barrel stabilizes the rifle and minimizes recoil. This, in turn, helps instill inner calm and greater self-confidence – two factors that directly impact your success.

Thanks to interchangeable barrels, hunters can have both normal and Semi Weight options at the ready. After all, preferences and conditions change from hunt to hunt.

The Semi Weight barrel can also be fluted. See “Tips & Comments” on page 96.

R 93 Semi Weight Luxus
Optional features: rifle scope and mount

R 93 Semi Weight

The muzzle of the Semi Weight barrel measures 19 mm across. The Semi Weight barrel is approximately 350 g heavier than the standard barrel.

Whether aiming quickly at moving game or shooting over long distances, the weight distribution of the Semi Weight barrel effectively increases aiming stability and accuracy.

Far-reaching capabilities

VARMINT · MATCH

R 93

R 93 Standard Varmint
with optional extras

R 93 Varmint

The R 93 Varmint has a fluted Match barrel and an individually adjustable comb to ensure an ergonomic aiming position.

The extra wide forearm offers both a secure grip and a stable support base, and features an integrated rail for the optional bipod.

R 93 Standard Match
with optional extras

R 93 Match

Designed for training and competition shooting, this bolt action rifle features the heavy fluted barrel of the Blaser R 93 LRS 2 precision rifle and no sights.

The LRS 2 Long Range Sporter consistently demonstrates the R 93's potential in international competitions.

Accurate shooting over long distances and from different shooting positions places great demands on any hunting rifle, but the R 93 Varmint rises effortlessly to the challenge. It possesses the three characteristics that every hunter holds dear: it is safe, fast and extremely accurate.

The fluted Match barrel of the R 93 Match was specially developed for target shooting and is truly outstanding when it comes to accuracy. Like the R 93 Semi Weight, the heavier barrel weight increases accuracy. The wide forearm helps ensure a steady posture, even with free-hand shooting.

When the going gets tough

SAFARI

R 93

On big game hunts, when speed, safety and reliability are all-important, the R 93 is in its element.

In moments of extreme tension when there is pressure to perform, competent handling, readiness to shoot and confidence in the firearm's reliability and accuracy will determine the outcome of the hunt. The R 93 is a solid foundation on which to build unforgettable experiences.

Firearms used on safari hunts are subjected to great strain, rough handling and extreme dirt. The hardy finish, enclosed construction and impossible-to-lose magazine on the R 93, which is always carried uncocked, make it a weapon predestined for extremely rigorous conditions.

The R 93 Safari is also available with an Offroad gunstock.

R 93 Safari

The heavy barrel, broad forearm and kickstop in the buttstock, make the R 93 Safari relatively pleasant to shoot regardless of caliber class: .375 H+H or .416 Rem. Mag.

Easy takedown and safe storage in a compact, durable rifle case make it easy to transport the R 93 on long journeys. The carrying case is available as an accessory.

Bolt action rifle R 93 basic model/Attaché

Bolt action rifle R 93 Semi Weight

Bolt action rifle R 93 Stutzen

Bolt action rifle R 93 Match and Safari

Caliber changes with the R 93

R 93 rifles can accommodate any barrel variation. When using barrels in different caliber groups, the correct bolt head is required and can be changed quickly and easily at any time. Every R 93 barrel is supplied with a correlated magazine.

Model changes with the R 93

All R 93 rifles can be refitted to meet Semi Weight, Match or Safari specifications. This requires exchanging barrels and adding the correct forearm.

All R 93s can be fitted with an Offroad gunstock, in which the action is essentially integrated with the trigger group. When refitting, only the barrel, magazine and bolt are inserted in the Offroad gunstock.

Interchangeable Offroad gunstocks are also available for Semi Weight, Safari and Match barrels. All Offroad stocks can be adapted to the new barrel profile.

Left-handed R 93s

All R 93s can be fitted with a left-handed bolt and stock. A right-handed lock can be exchanged for a left-handed one at a later date.

Please note, that we can not guarantee the permanent availability of all listed calibres.

From 19th June, 2006, Blaser will be online with a new internet page. Under the familiar address www.blaser.de the product ranges rifles/combinations, shotguns, accessories as well as the Blaser Active Outfits clothing line each with the latest developments and additions are presented.

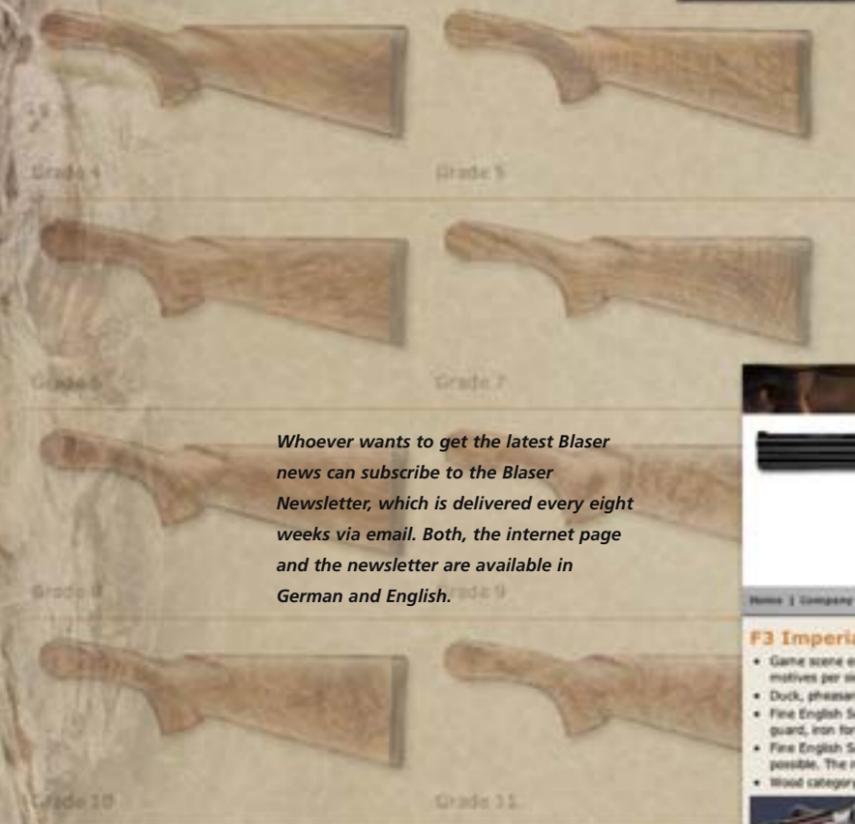

In the rifle section discover the new R 93 Octagon as well as a whole lot of compact packages. The shotgun section features the new F3 Attaché and shooting glasses specifically developed for shotgun shooting, furthermore, a new collection of sporty, elegant and functional clothing from shooting jackets to t-shirts can be found here.

The Active Outfits section features the new collection which will be available from August 2006: New fleece jackets and accessories in Blaser's own Mélange Design, new knitwear jumpers, an elegant leather vest and one multi-functional hunting combination.

Not only browsing through the current program pays well when visiting the completely new design internet page, but also a look at the "profile" section - which, among other things, offers a company chronicle leading you back to the year 1957 when Blaser was established - is well worth your time. The service section offers a host of downloads, an event calendar, services and a glance into the Blaser shooting cinema.

Wood Selection

There are ten grades of Turkish walnut to select your preferred color and grain vary within each grade. The stocks shown are examples. We will be pleased to source the character of the wood that best suits your specific demands.

Whoever wants to get the latest Blaser news can subscribe to the Blaser Newsletter, which is delivered every eight weeks via email. Both, the internet page and the newsletter are available in German and English.

Hunting is either an escape from everyday life into a more natural world, or a regular duty and very hard work. In both instances, Blaser combination guns have been used successfully for decades.

A cut above

The story begins in 1963 with the legendary Blaser over and under shotgun rifle, which established our safety concept, the manual cocking system. Further developments culminated in 1995 with a technique that allowed adjoining barrels to behave independently, float and expand freely.

Cumbersome side effects, such as the rising point of impact when shooting in succession, suddenly were a thing of the past.

These two innovations revolutionized the over and under product range and initiated its two-way expansion:

Firstly, the B 95 over and under shotgun rifle and Bergstutzen with single lock action. After each shot is fired, the rifle is uncocked again.

Secondly, the B 97 over and under shotgun rifle, Bergstutzen and double rifle with double lock action. Two firing pins are cocked at the same time and the second shot is ready to fire without re-cocking.

Blaser

Closely linked: variety and comfort

OVER AND UNDER SHOTGUN RIFLE
BERGSTUTZEN

B 95

Safe

Easy handling helps rule out operator error. The B 95 and B 97 are carried uncocked and are only cocked just before shooting. The front trigger essentially serves the lower barrel, while the rear trigger controls the upper barrel. Top-class direct triggers make the set trigger unnecessary.

Accurate

Each barrel is free floating, expands and remains focused on the point of impact. Target coverage is unaffected by the other barrel. The barrels can be adjusted to each other, which is a great advantage when using slugs. Having two direct triggers is reassuring in any situation.

Reliable

The locking strength of Blaser's over and under guns is due to the large underlug locking. It can handle a high number of shots and intense use without any problems. The velvety barrel and action finish protects against corrosion and damage.

Huntable

The rifle is compact and perfectly balanced. All components are ergonomically arranged and its operation is logical. Blaser over and under guns offer maximum room for maneuvering.

Versatile

Changing to a different caliber or model is easy and inexpensive. Within the B 95 and B 97 lines, the barrel combination can also be used to change the rifle type. For example, the double rifle can become an over and under shotgun or Bergstutzen, and an over and under shotgun can become a Bergstutzen.

B 95 over and under shotgun rifle

The combination of shotgun and rifle is a Blaser classic. Your gunsmith will easily be able to adjust the barrels to each other, making your Blaser over and under

shotgun rifle unbeatable when using slugs. The "95" stands for increased safety: the rifle is uncocked after every shot.

B 95 Bergstutzen

Two accurate rifles with different calibers in one compact firearm. Ideal for all-around hunting in any type of terrain. The upper barrel is embedded in a support bore and

can be adjusted precisely to the lower barrel. An interchangeable rifle/shotgun combination barrel enhances versatility.

After each shot, the lock is uncocked.

Blaser over and under shotgun rifles in caliber 12/76 and 20/76 are designed to handle the requirements of steel-shot and are magnum proofed. (The stamped "V" and "Lily" of the proofhouse indicate magnum proofing with additional steel proofing).

Driving force

DOUBLE RIFLE
OVER AND UNDER SHOTGUN RIFLE
BERGSTUTZEN

B 97

When a lightning-fast second shot is vital, such as on drive hunts, or if doublets are to be shot on a doe hunt, then the B 97 double lock is the perfect choice.

Blaser 97 operation

	Over and under shotgun rifle	Bergstutzen	Over and under (double) rifle	Double rifle with single trigger
Front trigger	Lower barrel Caliber	Lower barrel Large caliber	Lower barrel Caliber	First shot: Lower barrel
Rear trigger	Upper barrel Shotgun	Upper barrel Small caliber	Upper barrel Caliber	Second shot: Upper barrel

Two firing pins are cocked at the same time.
The second shot is ready to fire without re-cocking.

Single trigger

The B 97 double rifle can be fitted with an optional single trigger. Due to the fixed succession of shots (first shot from the lower barrel, second shot from the upper barrel), the single trigger can not be combined with an over and under shotgun rifle or Bergstutzen interchangeable barrel assembly.

B 97 Luxus double rifle
with single trigger and
optional extras

Blaser over and under shotgun rifles in caliber 12/76 and 20/76 are designed to handle the requirements of steel-shot and are magnum proofed. (The stamped "V" and "Lily" of the proof-house indicate magnum proofing with additional steel proofing).

B 97 double rifle

The double rifle was originally developed from social hunting. No wonder that the Blaser B 97 is in its element with moving game. A single trigger is available

upon request. The high accuracy and adjustability of the barrels also makes it ideal for shooting over great distances.

B 97 over and under shotgun rifle

The Blaser over and under shotgun rifle is equipped with a double lock action.

Barrels can be aligned for fast, successive and accurate firing of bullet and slug.

B 97 Bergstutzen

Fire two different calibers in quick succession. The upper barrel is embedded in a

support bore and can be adjusted precisely to the lower barrel.

DOUBLE RIFLE

B 97

CLASSIC

The double rifle has always been a very popular rifle on drive hunts. Many passionate drive hunt shooters prefer this elegant, light and handy rifle.

The Blaser 97 Classic Double Rifle with soldered barrels exceeds all expectations with superior "huntability" in a traditional design.

*Double rifle B 97 Classic
LUXUS*

*Over and under shotgun rifle
B 97 Classic*

Due to the soldered barrels, rounding off the sleek elegance and reducing weight, the B 97 Classic has an extremely slim appearance. All other features are known from the regular B 97. The name "B 97 Classic" stands not only for this special Blaser double rifle, but for a complete rifle package featuring a Zeiss Varipoint rifle scope and the Blaser

saddle mount; the rifle is test fired and mounted at the plant. Thus Blaser guarantees the optimum shooting performance of both barrels. Those hunters selecting the optional single trigger can shoot the B 97 Classic like and over and under shotgun. Available grades start with "Luxus".

Please note, that we can not guarantee the permanent availability of all listed calibres.

The first technical advances made by mankind can be traced back to the development of hunting weapons.

The evolution of hunting weapon technology is not only fascinating; it proves that it is worth refining a good idea.

When ideas come together

Take the drilling, for example. Invented by our great-grandfathers, it combines the double-barreled shotgun with a stalking rifle. This basic notion has developed in many different ways and in 1999 we breathed new life into it with numerous innovations. The current D 99 line brings together the ideas of many generations. It is traditional, yet modern and fit for the future all at the same time.

There are three models to choose from: a traditional drilling with two shotgun barrels, a double rifle drilling and a drilling rifle.

Initially, it is the unconventional barrel arrangement with one rifle barrel over two lower barrels that catches the eye.

Each barrel is free floating and shoots with the utmost accuracy. The extremely stable tilting block locking system guarantees maximum locking strength and service life, even with intense use and large calibers. D 99 drillings are safe, easy to use, have brilliant trigger characteristics and outstanding balance, are comfortable to shoot and visually appealing.

Blaser

Universal talent

DRILLING

D 99

Safe

The cocking slide cocks both locks immediately before the shot is fired. Likewise, when the rifle is opened, both locks are automatically uncocked. Operation is logical and intuitive.

Accurate

The D 99 is the only drilling to have all three barrels free-floating and temperature-independent. Shooting accuracy is not affected by the order in which the barrels are fired or the quick succession of shots. The tilting block locking system also plays a key role in the consistently high level of accuracy.

Reliable

At the core of Blaser drillings is the tilting block locking system, which ensures long-lasting, reliable performance. The sophisticated barrel finish and robust action coating make the D 99 an extremely resistant companion for active and extreme hunting.

Huntable

The Blaser drilling is as it appears: easy to handle and carry, quick and easy to point. Excellent joining of the barrels, flawless balance and expert stock design make it perform just like a perfect side by side shotgun.

Versatile

The three barrels can be combined in any way the user sees fit: either as two shotgun barrels and one rifle barrel, or as a Duo with one shotgun barrel and two rifle barrels using the same or different calibers. The Trio offers the enthusiast virtually any combination of rifle calibers.

Drilling D 99 Standard with optional extras

D 99, D 99 Duo/Trio operation

	Selector switch in upper position (red dot visible) ●	Selector switch in lower position (red dot not visible)
Front trigger	Upper barrel	Right lower barrel
Rear trigger	Left lower barrel	Left lower barrel

Two firing pins are cocked at the same time. The second shot is ready to fire without re-cocking.

Blaser Drillings D 99 and D 99 Duo are designed to handle the requirements of steel-shot and are magnum proofed. (The stamped "V" and "Lily" of the proofhouse indicate magnum proofing with additional steel proofing).

Drilling D 99

The drilling D 99 with two shotgun barrels and one rifle barrel is perfect for small game hunts, when a stalking rifle is needed on top.

The art of combining

**DUO - DOUBLE RIFLE DRILLING
TRIO- RIFLE DRILLING**

D 99

The D 99 Duo and Trio are the rifle specialists in the Blaser drilling range. They are either double rifles with an additional barrel or combine two or even three different rifle calibers. Two shots can be fired in quick succession.

*Drilling D 99 Luxus
with optional extras*

Blaser Drillings D 99 and D 99 Duo are designed to handle the requirements of steel-shot and are magnum proofed. (The stamped "V" and "Lily" of the proofhouse indicate magnum proofing with additional steel proofing).

Double drilling rifle D 99 Duo

Two identical rifle calibers combined with a shotgun barrel.

Over and under drilling D 99 Duo

A shotgun with both a small and large rifle caliber.

SIDE BY SIDE COMBINATIONS

Versatility and freedom of style characterize today's hunting culture, in both traditional firearms and modern creations. The S 2 line proves that progressive technology and traditional style are not mutually exclusive and can exist side by side.

Strong parallels

Over the last 35 years, Blaser has introduced numerous improvements that have perfected hunting and captured new markets worldwide. The first innovation of this millennium was the S 2 side by side line, a masterful enhancement of a popular hunting firearm. It includes special models for both big game and driven hunts. These double rifles with adjacent barrels are true classics. A versatile side by side shotgun rifle rounds off the range. Tried and true Blaser design features, including free-floating barrels, the tilting block locking system, direct triggers, double-lock manual cocking system, easy takedown and barrel exchange, ensures a top quality hunting experience.

S 2

Blaser

Side by side: mobility and constancy

DOUBLE RIFLE
SHOTGUN RIFLE

S 2

Safe

The S 2 has the Blaser double-lock manual cocking system. Both locks are cocked immediately before firing by pushing the cocking slide forwards.

Accurate

The S 2 is the first side by side firearm with two free-floating, temperature-independent barrels. Rifle barrels on all S 2 models can be adjusted to the same point of impact at the muzzle. Blaser direct triggers contribute to an expert shot.

Reliable

Destined for arduous use on driven and big game hunts. The robust tilting block locking system is the foundation for the rifle's reliable accuracy and lasting resilience. The velvety barrel and action finish protects against corrosion and damage.

Huntable

The sleek form and small opening angle make it comfortable and quick to operate. Fast, steady aim even when swinging is ensured by the balanced weight and finely tuned stock design.

Versatile

Like its name suggests, the S 2 side by side shotgun rifle combines both rifle and shotgun. The two calibers of the double rifle can either be the same or different. All standard calibers are available. Barrel combinations are easy to change.

S 2 operation

Front trigger	Right barrel
Rear trigger	Left barrel

Two firing pins are cocked at the same time. The second shot is ready to fire without re-cocking.

Blaser shotgun rifles S 2 are designed to handle the requirements of steel-shot and are magnum proofed. (The stamped "V" and "Lily" of the proofhouse indicate magnum proofing with additional steel proofing).

The S 2 range covers all applications: driven hunts, high raised stands, stalking, hunting abroad and safaris. It skillfully combines a high level of specialization with universal possibilities.

Whether firing shots in quick succession or over long distances, patrolling hunting areas or proofing your skill in a challenging big game hunt: the S 2 is all Blaser, completely versatile, extremely resilient and very stylish.

S 2 double rifle

When using two identical calibers, it stands out as a traditional double rifle with speed and accuracy even at long range. Combining a small and large caliber the S 2 displays its strength as a sophisticated stalking rifle.

Single trigger

The S 2 double rifle can be fitted with an optional single trigger. The first shot fires the right barrel, the second shot fires from the left. The S 2 Safari is not available with a single trigger.

The S 2 is the first side by side shotgun rifle to feature the extremely strong

Blaser tilting block locking system, which enhances accuracy and resilience.

200 percent accuracy

DOUBLE RIFLE

S2

SAFARI

Safari experts agree that the perfect safari double rifle must be a fully-fledged rifle with both barrels, locks and triggers. The S 2 provides the answer. It offers lightning-fast 100 percent rifle performance per barrel – which means twice – in one elegant, compact firearm.

The S 2 is adjusted to 100 meters in the factory with an assembled scope, making it completely universal.

S 2 Safari double rifle

Caliber options include: .375 H+H Magnum, .500/416 Nitro Express, .470 Nitro Express and .500 Nitro Express. A barrel length of 62 cm fully exploits the power of the NE calibers. The weight distribution of the gun is set individually to each caliber. The S 2 Safari is equipped with solid steel sights.

The trigger pull of 1500 g is set to the class and weight of the caliber. The buttstock of the S 2 Safari is stronger, with a straight back, traditional Monte-Carlo cheek piece and Pachmayr decelerator rubber gunstock recoil pad, making it a pleasure to shoot. The Kickstop in the buttstock reduces recoil.

Body, mind and technology bring their strength to bear. But the art is in bringing them together. At the same place in a split second.

A striking combination

Shotgun-shooting requires skilful eye-to-hand coordination. The right shotgun carries out the demands of the shooter, following instinctive and unerring trained actions, and represents the sum of ergonomics and technology.

When Blaser designs new hunting and sport guns, research and development is all-important and meticulous.

The objective is to amalgamate traditional values with the latest technology and create weapons of superior function, design and distinction.

In doing so, Blaser has enriched the lives of active shooters and hunters many times over. Blaser's latest innovation is impressive for both its advanced manufacturing and the classic elegance of the design. Launched in October 2004, the F3 shotgun is a true success story and tangible to all.

Winner by Design

COMPETITION · COMPETITION TRAP · GAME

F3

F3 Design Highlights

First class balance.

The F3 Game offers a "neutral balance" and thus precise weight distribution from the muzzle to the recoil pad.

The F3 Competition features the Blaser Balancer as a standard, in order to individually optimise the weight distribution for competition.

Intuitive pointing, accurate shooting

Both the expert stock and forearm design and the barrel shape of the F3 are tailor-made for intuitive pointing. The trigger offers distinctive and elaborate features: an innovative, precise locking mechanism, well tough-out ergonomics and configurations and crisp trigger characteristics guarantee a rapid response to the command to fire.

Optimised Recoil

The straight and low force path of the shot optimises recoil and is a direct result of scientific research into barrel, receiver and stock design.

F3-Innovations

Trigger and lock. 100% mechanical, single-selective trigger function, independent from recoil. 1500 g/3.3 lbs trigger pull out of the box. In line design of hammer and firing pin. Ergonomically optimized, trigger blade adjustable in length.

Safety. Safety hammer catch system and trigger safety.

Lock-up. Massive low profile lock-up with generous locking area.

Triplex Bore Design. Flat forcing cone, "Overbore" internal bore diameter.

Steel and magnum proofing. The F3 is designed to handle the requirements of steel-shot.

Ejection-Ball-System (EBS). Ejector springs are cocked when the shot is fired and the gun is opened.

Balancer. The balancer regulates the weight of the buttstock with two weight cylinders.

F3 Game Standard
with upgraded wood

Winning Ways

From the very first moment you see the F3, it is clear that everything about this shotgun is designed to win. The low receiver and masterful stock define its streamlined appearance and "shootability".

The unique shape of the butt stock reflects thorough studies on body anatomy and movement. It is perfectly formed and unerring in accuracy: A shotgun that incites you to shoot.

F3 Game for the field

- Game barrel (lengths see image on the left)
- Elegant sporting forearm with drop shape
- Sporting buttstock for the field (hunt, wingshooting, Compac Sporting and Olympic Skeet)

- Caliber 12/76 (3")
- Total weight: approx. 3.3 kg
- Options:
 - adjustable pad
 - adjustable comb
 - balancer (minimum length of pull 350 mm)
 - custom-made stock
 - left handed stock

F3 Competition Sporting for Sporting, Compac Sporting and Olympic Skeet

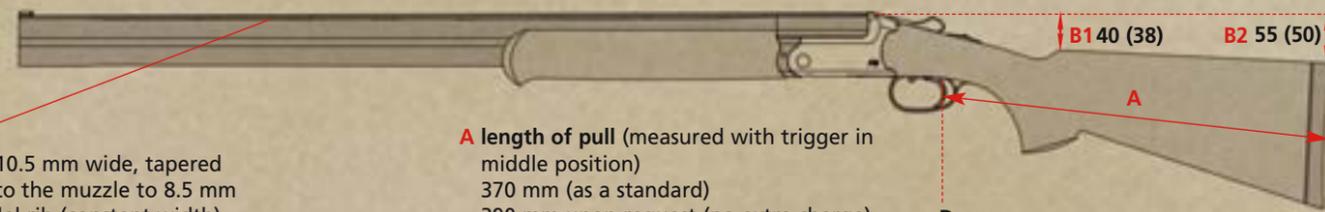

- Competition barrel (lengths see image on the left)
- Elegant sporting forearm with drop shape
- Sporting buttstock for the field (hunt, wingshooting, Compac Sporting and Olympic Skeet)
- Rubber pad 1,7 cm (Slip Back)
- Blaser Balancer as a standard (minimum length of pull 350 mm)

- Caliber 12/76 (3")
- Total weight: approx. 3.65 to 3.8 kg
- Options:
 - adjustable pad
 - adjustable comb
 - custom made stock
 - left handed stock

F3 Competition Trap for Olympic Trap and Double Trap

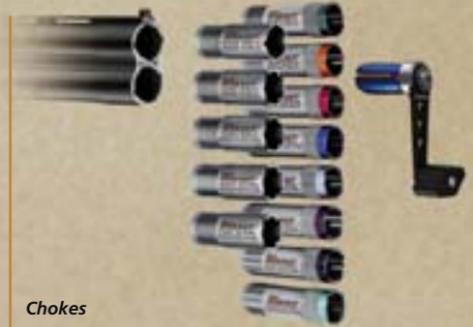

- Competition barrel (lengths see image on the left)
- Semi-beavertail forearm with recessed grip
- Trap Monte-Carlo buttstock with the comb being parallel to the rib

- Rubber pad: 2.5 cm Old English black (without Slip)
- Blaser Balancer as a standard (minimum length of pull 350 mm)
- Caliber 12/76 (3")
- Total weight: approx. 3.65 to 3.8 kg
- Options:
 - adjustable pad
 - adjustable comb
 - custom-made stock
 - left handed stock

A length of pull (measured with trigger in middle position)
370 mm (as a standard)
390 mm upon request (no extra charge)
Other lengths of pull are manufactured upon request at extra charge.
Left handed stock: optional (at extra charge)

Drop:
B1/B2 38/50 mm upon request (no extra charge)
B1/B2 40/55 mm (as a standard)

Chokes

The F3 features two Original Briley Chokes flush to muzzle of your choice as a standard. Unlimited steel proofing up to half choke. Extended, manually exchangeable Briley Spectrum Chokes are optionally available.

Choke/lead shot	Restriction	Notches	Corresp. steel shot
cylinder*	0.000 mm (0")	-	skeet
skeet	0.125 mm (0.005")	-	1/4 choke
1/4 choke	0.250 mm (0.010")	I	1/2 choke
1/4 - 1/2 choke**	0.380 mm (0.015")	-	3/4 choke
1/2 choke	0.500 mm (0.020")	II	1/4 choke
3/4 choke	0.625 mm (0.025")	III	-
3/4 - 1/1 choke**	0.750 mm (0.030")	-	-
1/1 choke	0.850 mm (0.035")	IIII	-
3/4 choke**	1.050 mm (0.041")	-	-

* Only available flush to muzzle
** Only as an extended version available (Spectrum choke)

Checking: Laser cut wood grades from 1 to 5 (incl.).

Fine checkering from wood grade 6 to 11.

F3 Balancer:

- optionally available with F3 Game models
- available as a standard with all F3 Competition models

Adjustable comb (as an option)
Adjustable in height, horizontally and laterally.

Adjustable pad (as an option):
Adjustable in drop, cast and pitch. A combination of both options can be effected, if the length of pull is at least 360 mm.

The F3 "Game" for hunting and wingshooting and the F3 "Competition" featuring various options, complement each other to a universal shotgun system.
The F3 is the first complete modular shotgun. The change of different barrels, buttstocks and forearms is simple.

Hunter profiles

Character, personal history and reality shape the style and profile of every hunter. Similarly, a passion for hunting evolves from many things: family tradition, inspiration from friends, professional reasons, an affinity with nature or a yearning for the wild. Many opportunities exist. Some we pursue, others remain an exciting dream. Do we venture abroad or stay close to home? Do we seek active and challenging new adventures, or do we prefer watching, waiting and stalking in peaceful solitude? How and where we choose to hunt, as well as personal preferences and experiences, will influence the choice of firearm – an exciting process in itself. This part of the catalogue gives you an insight into what Blaser employees have to say, which firearms they prefer and why.

TIPS & COMMENTS

from the Blaser Team

*R 93 Semi Weight Grand Luxe:
compact and timeless*

"I spend a lot of time on the road, both for business and hunting, so I need a gun that travels well. For me, perfect balance is having the weight evenly distributed to both hands. With its short action, the R 93 is already one step ahead in terms of design. On home ground, I use the .308-caliber Semi Weight model with an extra-short 54-cm barrel. Overseas, I opt for .300 WSM and the 57.7 cm Semi Weight barrel with fluting and quick alignment sight. Both models have almost exactly the same balance. To me, the Grand Luxe with selected root wood embodies timeless style."

Bernhard Knöbel, Managing Director

*K 95 Stutzen Baronesse –
beautiful and accurate*

"In my opinion, the traditional K 95 single shot rifle is the best hunting rifle of all time. It is perfect for concentrated firing and selective hunting, which is just what I need. Anyone, like me, who has stunned Benchrest shooters with their K 95s outstanding accuracy, knows how it feels to be secretly proud and satisfied at having been underestimated. My

personal recommendation is the K 95 Baronesse Stutzen with delicate arabesque engravings and gunstock magazine. One visit to our gunstock warehouse and you will understand why I gave in to temptation and invested more."

Gunther Stoschek, Product Manager and Head of Marketing

TIPS & COMMENTS

from the Blaser Team

*Pure skill –
B 95 over and under shotgun rifle*

“My favorite is to hunt foxes in the winter. Every time I venture out, I experience something new, like spotting unexpected martens or a lone sow. Nothing beats seeing the moonlight glisten on the snow, and shooting a fox from a distance of 30 meters or more with my B 95 over and under shotgun rifle. Plus, the perfectly positioned slug makes

a perfect backup for any scenario.”

Franz Zapf, gunsmith

*Fired up –
B 97 double rifle*

“An invitation to a sow driven hunt will often cause a spontaneous change of plans. After all, one must have priorities! For me active hunting is about hearing the dogs, feeling your pulse race, and shooting safely and quickly. The B 97 double rifle gives me the security I need and the success I crave. I chose the single trigger for quick successive shots – not only for drive hunts but also for hunting roe deer in my home ground.”

Helmut Müller, Assembling Manager

TIPS & COMMENTS

from the Blaser Team

Drilling D 99 Duo – take your chances

“A lot has changed at home, with some saying that sitting and waiting is pointless. If and when an opportunity does present itself, I want to be ready with a gun that shoots to my satisfaction, which is no mean feat given that I have high standards and work in the industry. The rifle barrels and the shotgun barrel of my D 99 Duo never let me down when it comes to accuracy. For style, I would recommend the half beavertail forearm.”

Andreas Huber, gunsmith

S 2 double rifle – long range success

“Side by side guns have always fascinated me. Unfortunately traditional designs are restricted to shooting over short distances. The Blaser S 2 is my dream firearm. It shoots just as well over long distances from a seated position as it does when hunting moving game.”

John Wiedemann, Assembly

“A side by side shotgun rifle exchangeable barrel for the S 2 double rifle rounds off my personal package. Handling a familiar gun gives me self-confidence and success, very important on social hunts where everyone knows I’m from Blaser. I found my ideal root wood in our gunstock warehouse and have had it initialed on the pistol grip to make my firearm unmistakable.”

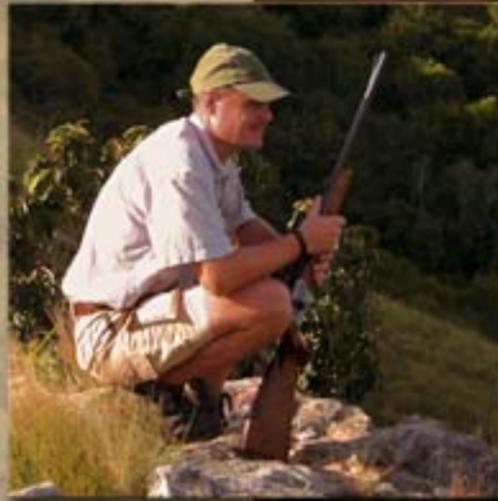

Siegfried Mayer, Sales

TIPS & COMMENTS

from the Blaser Team

Ever present – the R 93 Safari

“I first came across Blaser many years ago in my homeland of Namibia, when many of our hunting guests raved about their Blaser guns. This was one of the reasons I ended up pursuing a career in Isny, Germany. Today I am fortunate enough to accompany hunters on their travels to Africa, and the R 93 Safari always comes too. For me, it is much more than a tool of the trade. Numerous professional hunters and their guests have found my enthusiasm contagious. I would never travel without the .416 Rem. R 93 Safari Luxus with a .300 Win. Mag. Semi Weight exchangeable barrel and the discreet rifle case that goes with it.

I still have one last dream, though:

the S 2 Safari Imperial double rifle

engraved to my specification. I can see it now . . .”

Hartmut Liedtke, Purchasing Manager

Inspiration

The function and practical value of a firearm are in no way influenced by its appearance, whether engraved or made with rare high-grade stock wood. Regardless, nearly every hunter invests money in engraving and precious wood. Ultimately the firearm reflects the hunter's personality, depicts his way of hunting

and embodies his passion. Over the course of history, hunting and gun making has always had a strong culture. Hunters recognize that the firearm is much more than a tool. Their emotional investment in its appearance clearly demonstrates how closely the inspiration to hunt is linked to their reverence for nature and its creations.

Blaser

Creation

The creativity of the engraving process is as important as the handcrafted excellence. Endless concentration is required to create something of intricate detail and strength of expression that marks the grand tradition of firearm engraving.

Connoisseurs of the art know that even casual admirers have to invest almost as much time as the engraver to really appreciate the subtleties, nuances and ambiance of the custom engravings.

Engraving motifs

The scene for an engraving can be inspired by a hunting scenario, photograph or drawing. It can even be motivated by pure indulgence. We will be pleased to bring your ideas to life, or you can choose an existing engraving and add your own personal touch.

There are essentially three types of engravings: traditional animal images, scenes based on real or fictitious events, and motifs from paintings and historical templates.

An exquisitely designed hunting rifle originates in the imagination and takes shape with engraving motifs, decorative ornamentation, distinctive wood grains and other exquisite design features.

We work closely with our distribution partners, advisors, gun makers and engravers to bring your ideas to life.

Aside from producing designs by customer request, Blaser also creates and custom finishes true one-of-a-kind firearms. Keeping the hunting culture alive, each creation is visually unique, timeless in beauty and of enduring value.

Ornamentation

Even at its most discreet, the interweaving of leaves, grasses, light and shadow authenticates the art, imprinting the values of hunting on the action, stock and barrel.

The possibilities are endless. Designs range from elaborate to understated, and from traditional to modern. Ornamentation is used mostly to frame or accentuate a motif and usually depicts the vegetation most appropriate to the game or historical era. Fans of discrete elegance are often satisfied with simple, neutral ornamental engraving.

Engraving techniques

There are four basic techniques: traditional flat engraving, fine Bulino engraving, deep engraving and relief engraving. Particularly elaborate pieces show the motif in relief because this is the most three dimensional effect. On the other hand, ornamentation is often flat or feather engraving. Continuous relief engraving that extravagantly emphasizes and models the ornamentation is particularly impressive.

*Drilling D 99 Super Luxus
with mountain sheep motif and leaf arabesques.*

*B 95 Super Luxus over and under shotgun rifle.
Wild boar engraving with oak.
Special stock wood.*

MODEL
Super Luxus

Both sides of the action plate on the Super Luxus feature two animals in a traditional flat engraving. English arabesques, oak or leaf arabesques frame the motif. Pure ornament engravings are also possible.

Single shot rifles are decorated on the barrel base, bolt action rifles on the trigger guard. The action of the D 99 and S 2 models has long side plates. Beautifully grained walnut is chosen. The pistol grip has a silver cap that bears either an animal engraving or a monogram.

*S 2 Super Luxus double rifle
with decorative English arabesques
and leaf engraving.*

*R 93 bolt action rifle.
Super Luxus.
Deer with arabesques
and leaves.*

*K 95 Super Luxus single shot rifle
with deer and leaf arabesques.*

K 95 Exclusiv single shot rifle with deer. Oak used for filling and gunstock carving.

MODEL *Exclusiv*

Both the hunting scene and decorative ornamentation are deeply engraved. Two animals – your choice of game – are featured on either side of the rifle. English, oak or leaf arabesques cover the remaining space. Other decorative elements are also possible. Fine ornamentation is found on the barrel base,

and on the trigger guard and bolt housing of bolt action rifles. D 99 and S 2 models have long side plates on the action and a silver pistol grip cap that can be engraved with an animal scene or a monogram. The exquisite walnut grain features elegant carvings.

K 95 Super Exclusiv Stutzen single shot rifle with fine English arabesques.

MODEL *Super Exclusiv*

Choose four animals to be engraved in a flat style on each side of the action. One animal adorns the underside. More exotic ornamentation, such as thistle leaves, arolla pine branches, maple leaves and other decorative engraving are possible. The trigger guard is finely engraved, and the barrel base features a delicate gold inlay.

The titanium-nitrated trigger is gold-colored, and the bolt housing is fully engraved. All single shot rifles have elongated side plates. The pistol grip is finished with a silver cap that is engraved with an animal or a monogram. The rare walnut stock is decorated with lavish, yet tasteful carvings.

R 93 Super Exclusiv bolt action rifle with red stag scene. Oak filling and carving.

S 2 Exclusiv double rifle, special edition. Flat ornamental engraving with fine English arabesques.

R 93 Exclusiv. A leopard dragging down a gazelle. Filling and carving are traditional English arabesques.

R 93 Imperial Safari, special edition. Depicts lions dragging down a buffalo. Animals are depicted in an elaborate relief, the landscape and arabesques in fine Bulino. Lavish gold inlays in the barrel.

Figure below: S 2 Imperial double rifle. Red stag scene with oak. Optional extra: Filigree locking lever with ram head design.

K 95 Stutzen Imperial, special edition. Dynamic chamois scene with lavish background landscape in relief. Six animals. Filling is traditional English engravings with individual leaf ornaments in relief.

Imperial

MODEL

K 95 Stutzen Imperial with special edition engravings, including a lively ibex motif on the underside, monogram on the pistol grip cap, and animal on the trigger guard. Filling is a traditional English arabesque accented with relief-engraved leaves.

The Imperial is Blaser's crowning glory. Its impressive relief engraving is lavishly chased in artistic detailed work. Four animals of your choice are depicted on each of the long action plates, with one animal on the underside. More exotic items can be selected for the filling and gunstock carving. The trigger guard is equally ornate, and the barrel base features a delicate gold inlay.

The bolt action rifle has a fully engraved bolt housing. All single shot and combination rifles have elongated action plates. Triggers are titanium-nitrated and gold-colored. Also titanium-nitrated is the locking block on K 95 single shot rifles and the bolt head on the R 93 bolt action rifle. The silver pistol grip cap is either monogrammed or engraved with an animal scene. Sumptuous root wood, in your choice of grain and colouring, is used for the gunstock.

The R 93 no. 100,000 is a piece by master engraver Jürgen Göser. 22 types of game are depicted (also see page 90).

A masterpiece that combines the finest Bulino and relief engraving. From the elaborate background and lively depiction of wild animals to the imaginatively arranged gold inlays and other creative details, an unparalleled amount of time and effort went into creating this fascinating work of art.

Natural Beauties

First class walnut wood from trees that are over 300 years old is used to give the stock an inimitable appearance. This wood is found in the highlands of Caucasus, where the long

cold winters make the trees grow exceptionally slowly. The harsh climate and prolonged growth is what enhances the wood's resistance and shapes its fine and beautiful grain.

There are eleven quality grades of woods to select your stock from. Colour and grain vary within each grade. The stocks shown are only examples. We will be pleased to source the character of the wood and colour that best suits your specific demands.

If you have more exclusive requests, please make an appointment and we will invite you to our stock warehouse.

Character

Fine wood grows slowly over decades; its growth lines are unique. This makes every wooden gunstock inimitable in its grain and coloring. The higher the class, the more striking it appears, its value enhanced by the scarcity of the grain. Quality grades go up to the sumptuous

"century timber", which features an exquisite marble grain. In each model class, the gunstock can be increased in value yet further by investing more in the wood. If you would like an extraordinary wood, please make an appointment to visit our gunstock warehouse.

Gunstock carvings

Engravings in the action continue as a lavish carving on the gunstock.

Wooden ball on the bolt handle

Featured on the Attaché R 93, optional on all other R 93 models. The wooden side plates match particularly well.

Black drop shape makes a stylish gunstock end.

Half beavertail forearm

Optimizes handling. Optional on D 99 and S 2 side by side guns.

Fine checkering

It enhances the grip and subtly enhances the gunstock artwork.

Gunstock carving in relief

Shown on the right is a deeply carved woven motif.

Scaly checkering

Traditionally a refining feature of beautiful gunstocks, it enhances your grasp of the pistol grip and forearm.

Cheek piece with double rabbit

Art of Detail

Fine detailing refines every rifle with classic elegance and completes the look of a lavishly engraved model. Regardless of style, every gun is individualized.

Pistol grip caps

Engrave the silver end piece on the pistol grip with a favorite animal or your initials elegantly surrounded by English arabesques, old German leaf or oak leaf. We can also bring your ideas to life, whether it be a portrait of your hunting dog, a golden rose, a coat of arms or miniatures of thrilling hunting scenes.

Top row: caps for initials with arabesques, old German leaf or oak leaf frames
 Second row: animal motifs
 Bottom row: special editions

Gunstock magazine

Four cartridges, snugly stowed so they won't rattle, enhance the functionality of the gunstock.

Right: simple, understated engravings. Underneath: fully engraved arabesques, old German leaf and oak leaf. Animal portraits, initials and other engravings are possible.

Pistol grip cap and gunstock magazine can be added at any time.

Filigree locking lever

Choose an animal portrait, complete animal scene or decorative ornamentation.

Titanium-nitrated trigger.

Titanium-nitrated, gold-colored elements

The breech bolt is titanium-nitrated on the K 95 Imperial, and on other models upon request. The bolt head on the R 93 bolt action rifle can also be titanium-nitrated. Triggers respond well in both cases.

Right: titanium-nitrated K 95 locking block
 Bottom: titanium-nitrated R 93 bolt head

Engraved trigger guard

Left: partly engraved
 Right: fully engraved

Steel bolt handle ball

Anodized in black, with optional gold inlay.

The final steps

Those of us who work for Blaser and are passionate about hunting are never really completely alone, even when indulging in our favorite hobby. We are always thinking professionally about how to perfect our equipment. Just developing a firearm is not enough. We take it one step further, asking ourselves: what accessories make for perfect active hunting? We apply the same quality standards here as we do to gun making and only include what we would use ourselves. We also recognize that hunting is a living, breathing culture and long-standing tradition, hence we look at both practical value and style.

Blaser

ACCESSORIES

F3 Shooting glasses

The F3 shooting glasses have been designed by active shooters especially for shotgun shooting. They offer optimum view in any shooting position. The nose pads are adjustable in height and can be fixed to an individual fit. The frame of the one-piece polycarbonate 6C lens only contours the lower edge in order to ensure an unrestricted field of view. Three lenses in smoke grey, orange and violet provide

UV protection and quick interchangeable use. Depending on light conditions, visibility, contrast and contour definition can be optimized through the right choice and combination of lenses. Low weight and soft earpieces make the F3 shooting glasses even more comfortable. Hard case and protective bag included.

F3 Cap

F3 logo stitched onto front of the cap. Solid, navy blue or light beige cotton fabric. Piping in contrasting color along the visor. Side ventilation. Adjustable for all sizes. Made of 100 % cotton. Standard size.

Blaser Cap

Elegant yet practical, the sporty 100 % cotton Blaser cap is a popular classic. Now available in a new design with attractive embroidery. Also available in bright orange signal color for driven hunts.

F3 Shooting Jacket

Long-sleeved for the use in cold weather. In dark navy blue and with black leather trimming at shoulder level for buttstock and along the pocket borders. The shooting jacket distinguishes itself through its handy design: towel holder, adjustable waistband, movement slits on the sides, roomy hand-warmer pockets, large

back pocket with lateral slits on both sides, and elastic cuffs. Two inside pockets for documents. Mesh padding in the back area keeps the shooter comfortable. Titanium-colored Blaser logo on the breast pocket. Made of 65 % polyester, 35 % cotton. Available sizes XS – 5XL.

Shooting vests with elegant Blaser embroidery on the back are available on request!

Blaser Shooting Vest

Three shooting vests were designed and produced to coincide with the introduction of the Blaser F3 Shotgun – a summer vest and two all-year vests. They are available for right and left-handed shooters and have a 2-way zipper. Each side features two spacious front pockets re-enforced with leather and a Napa leather patch on the mounting position (“shoulder pocket”). The slits allow ease of movement and the adjustable waist-line provides perfect comfort. Functional features: Hand towel strap, breast pocket and spacious cartridge pockets. Summer vest with mesh lining in the back for better ventilation and spacious rear dual access slip pocket.

Isny Summer Shooting Vest (picture A): 65 % polyester, 35 % cotton, net fabric: 100% polyester, sand-colored.

Sizes: S – XXXL

All-Year Shooting Vest (picture B):

65 % polyester, 35 % cotton, khaki Lining: 100 % polyester. Sizes: XS – XXXL

Dark Blue Shooting Vest (picture C)

Titanium-colored Blaser logo on the breast pocket. Made of 65 % polyester, 35 % cotton. Available sizes S – 5XL. Available also for left-handed shooters.

F3 Shooting Blouson

Wind- and water-repellent, ultra-light and ideal for wear under the shooting vest. With covered two-way zip, elastic cuffs, waistband and high-closed collar. Conveniently tucked away in an included bag zipped to the inside back of the blouson. Color: black. Dimensions of the bag: 22x15 cm. Material 100 % polyester. Available sizes XS – 5XL.

A

C

B

B: Suitable for all single shot rifles and the bolt action rifle R 93. For a max. barrel length of 70 cm, as well as for 1 rifle scope. L x W x H: 82 x 30 x 9.5 cm.

C: Suitable for all single shot rifles and the bolt action rifle R 93. For a max. barrel length of 70 cm, 1 exchangeable barrel and 2 rifle scopes. L x W x H: 82 x 34 x 9.5 cm.

Blaser Leather Case

Reddish-brown leather, quality brass fittings and an elegant design interact to award the case that classically stylish look. Solid in shape and softly padded, the interior ensures that each part is well protected in its place. Combination locks guard against unauthorized access. An additional document section is included under the cover.

For rifles and over & under combinations:

A: Suitable for all single shot rifles and the bolt action rifle R 93. For a max. barrel length of 67.7 cm with demounted forearm, as well as for 1 rifle scope.

L x W x H: 72 x 26 x 9.5 cm

Shotgun leather case C

"Oak & Leather" Shotgun case

"Oak & Leather" Shotgun Case

This elegant, high-quality shotgun case is available for both precious single and double rifles. The leather case is hand- and custom-made. Features: Reddish-brown leather, quality brass fittings, oak wood frame, soft padding, document section under the cover and combination locks.

Blaser Sheaths

The highly durable and strong fabric of the Blaser shotgun sheath provides reliable protection for the gun. It is made of discreet dark green material and the characteristic Blaser logo shows its distinguished origin. Accessories can also be stored in the outside zipper pockets. A removable carrying strap provides convenient, agile transport.

Rifle sheath A

Suitable for all popular shotgun models. Total length: 135 cm.

Rifle sheath B

Suitable for the Blaser R 93 bolt action rifle and over & under combinations with mounted rifle scope; max. barrel length 60 cm. Total length: 106 cm.

Rifle sheath C

Suitable for all rifles; max. barrel length 68 cm. Total length: 120 cm.

ABS Rifle cases

ABS carrying cases are designed for modern mobility and tastefully complete the hunting equipment package.

Compact and lightweight, they feature a double ABS shell that protects the rifle against shocks and impact. All edges are rounded and trimmed with high quality leather. Inside, the case is lined with dark blue velvet. Three combination locks protect it against unauthorized access. Nobody would suspect that such a compact, elegant piece of luggage contained a hunting weapon.

Rifle case A

For Blaser single shot, combination and bolt action rifles with scope. Forearm disassembled. External dimensions L x W x H: 70 x 26 x 9 cm

Rifle case B

For the Blaser R 93 bolt action rifle with assembled forearm and scope. Also suitable for all single shot and combination rifles. External dimensions L x W x H: 78 x 26 x 9 cm

Rifle case C

For Blaser single shot, combination and bolt action rifles with assembled forearm. Additional compartments for exchangeable barrel and second scope. External dimensions L x W x H: 78 x 35 x 9 cm

A

C

Blaser ABS Shotgun case F3

The double-skinned ABS case with combination locks is the perfect safe protection for all F3 shotguns with a maximum barrel length of 81 cm. Special compartments provide plenty of space for screw-in chokes, shooting glasses and other accessories. With its compact, sturdy design, the case is also the perfect companion when travelling. The case is stylishly presented in shapely contours with quality leather edging and soft lining.

Suitable for all rifles of other manufacturers. External dimension: appr. 89 x 30 x 12 cm

Blaser Game Recovery Kit

Game recovery equipment is a vital necessity on every hunt. The attractive dark green fleece case, filled with high-quality, tried and tested tools, has its own compartment in the Blaser hunting rucksack.

- **The sport saw** is indispensable when gutting strong game.
- **The ratcheting pruner** quietly removes branches in the line of fire.
- **The hunting pocketknife** is made of ATS345 steel for maximum strength. Elasticized non-slip grips provide a secure grip even in wet conditions.
- **Original Petzl LED Headlamp** featuring 4 LEDs with a burning time of up to 150 hours, optionally with red or white light.
- **The hunting utility belt** makes transporting game over long distances easier. Both hands remain free. The belt can also be used as a reserve dog leash.
- **The disposable vinyl gloves** are obligatory when handling and gutting varmint.

Blaser Hat (on the right)

Fashionably cut and functional, this versatile hat can be worn when hunting or with leisure wear. Made from hare fur, it keeps you warm on cold days and provides shade from the sun. The wide brim protects spectacles and binoculars against rain, while the decorative leather band tastefully displays the Blaser logo.

Blaser Rifle Sling (on the right)

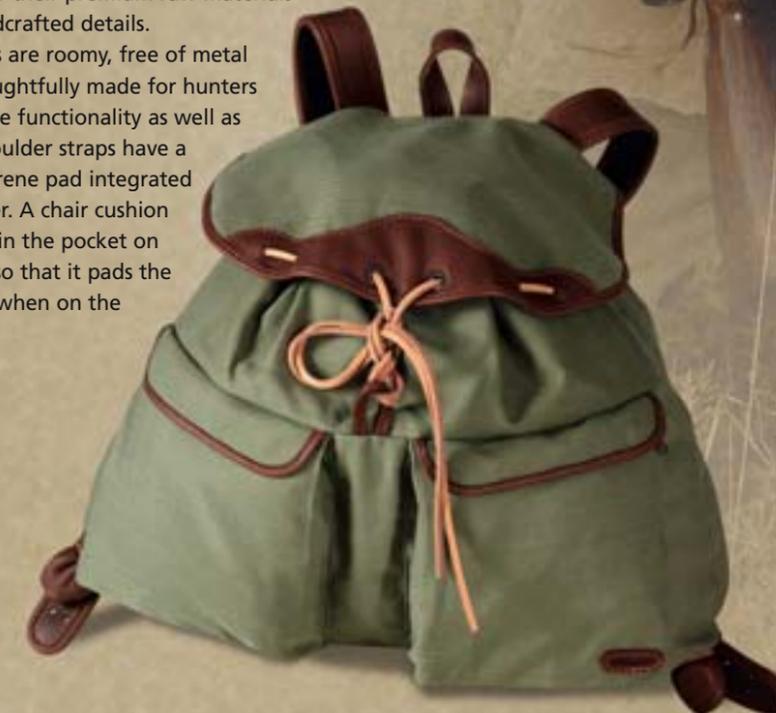

The Blaser rifle sling has been designed specially for active hunting. Its broad elastic and springy shoulder strap makes light work of carrying a hunting rifle over long distances and the non-slip neoprene underlay ensures reliable support. The lower section of the length adjustable carrying strap features an ammunition case for two ball cartridges, while the integrated detachable swivel rings with quick-release fastener are suitable for most standard rifle types. The combination of the modern dark green fabric, neoprene and the finest dark brown calf nappa leather offers both functional benefits and sleek elegance.

New Blaser Hunting Rucksacks:

Blaser tops off their line of hunting accessories with two classic rucksacks both of which stand apart for their premium raw materials and their handcrafted details.

Both rucksacks are roomy, free of metal parts and thoughtfully made for hunters who appreciate functionality as well as aesthetics. Shoulder straps have a non-slip Neoprene pad integrated into elk leather. A chair cushion can be stored in the pocket on the backside, so that it pads the hunter's back when on the move.

Elk Leather Rucksack (see above)

It is made completely from high quality elk leather. Elk leather is noted for being soft, smooth and distinctive in appearance. In hard use, the rucksack becomes even more beautiful.

Hunting Linen Rucksack (see on the left)

The original hunting linen is 100 % cotton and laminated with a water-repellent Teflon coating. It is just as rugged, tearproof and noiseless as the leather. Premium elk leather is used for the edging and the straps.

New: the Blaser multifunctional game recovery tool

The new Blaser hunting utility belt in signal orange is the optimum accessory for both shooters and drivers when hunting small game. The adjustable rope now features a carabiner snap link facilitating the

game recovery on steep terrain. The adjustable rope can be used in combination with the extremely sturdy stainless steel hanging hook to ease bleeding-out and cooling. Two bird hooks are delivered with every game recovery tool, thus leaving the hands free for the rifle when hunting.

ACCESSORIES

HUNTING EXPERTISE

RÄZ Quick Alignment Sight
The RÄZ sight was developed for instances when the hunter has to shoot very quickly over a very short distance. The target can be acquired quickly and precisely over the red rear sight and the yellow front sight. Covering of the goal is minimal. Available for all R 93 models.

Mag-na-Port, the Muzzle Brake
Four "ports" or slots in the immediate vicinity of the barrel muzzle, reduce the recoil by approximately 20 %. The Mag-na-Port can only be used on single-barrel arms. Caution: Mag-na-Port increases the blast by 1 to 1.5 decibels. Please always wear ear protection during shooting!

Kickstop, Recoil Reducer in the Gunstock
The stainless steel cylinder, filled with tungsten beads, is inserted into the buttstock and reduces recoil by about 20 %. It is suitable for all rifle models. The weight of the buttstock increases by approximately 600 grams. It improves the balance of rifles with heavy barrels. If required, the Kickstop can be inserted or removed by the hunter.

Rubber Gunstock Pad
The rubber pad attenuates the recoil and ensures that the rifle can be used down on the ground noiselessly and without danger of sliding away.

Blaser Gun Grease
In collaboration with the company Klever, Blaser developed a new gun grease. Top priority was contributed to the grease's outstanding rust protection. The neutral grease remains liquid until it reaches a temperature of -50 °C and is a reliable water repellent. It ensures maximum rust protection under extremely rainy and cold conditions as well as under heat and high humidity. Subjected to intensive testing, eg. in a salt-walter spray chamber, it shows effective rust protection even in touch with sweaty hands or sea water. The grease does not resinify, is very liquid and disperses excellently.

Blaser Hitpoint Pro red-dot sight
Having to scope quickly over short distances on moving game is a usual occurrence on driven hunts. In such instances, a red-dot sight is preferable as it leaves both eyes open to find targets and follow moving ones.

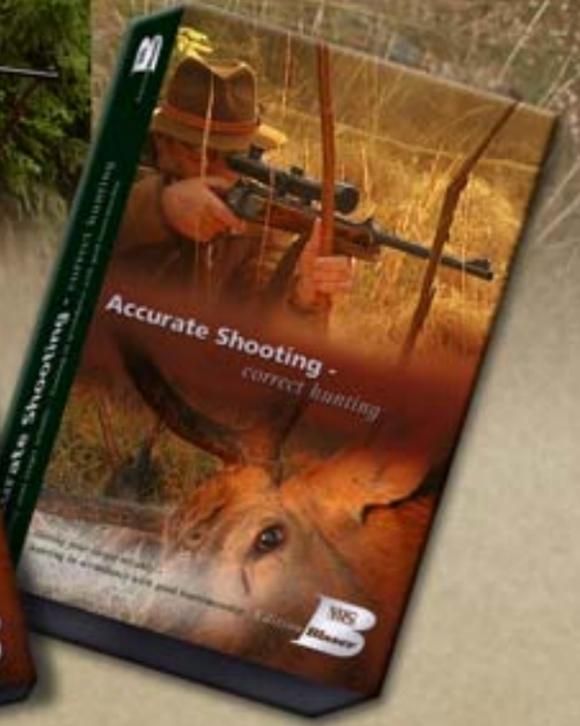

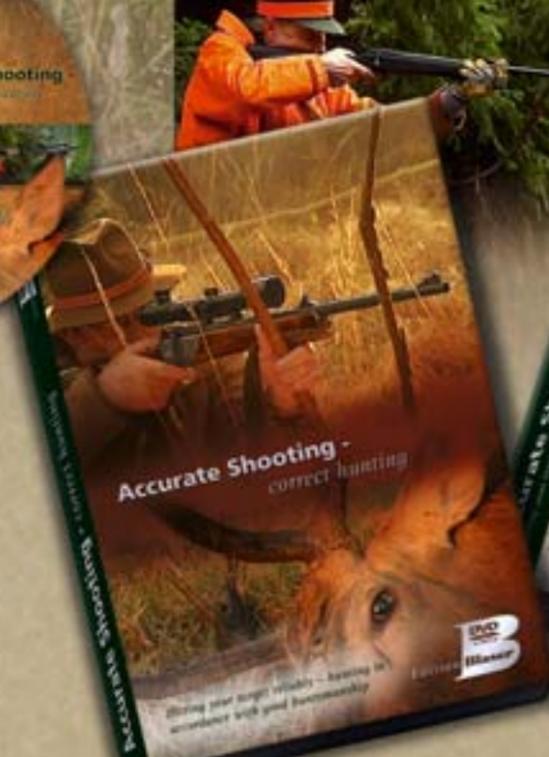

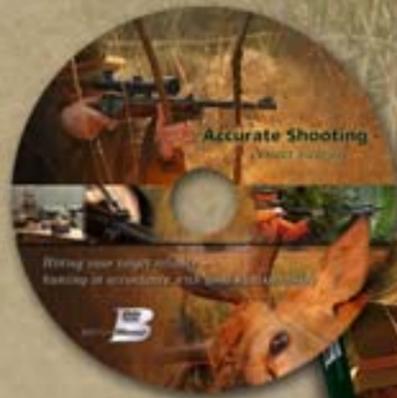

The Hitpoint Pro offers a wide field of view and good image quality. The saddle scope mount makes changing from scope to red-dot sight fast and straightforward. Once an expert has adjusted the Hitpoint, changeover in the field does not require a test shot.

The Blaser Hitpoint Pro is manufactured in cooperation with rifle scope manufacturer Schmidt & Bender.

Blaser Fast-access pouch:
Enables the hunter to be ready for shooting quickly: the leather cartridge pouch has a Velcro fastener so that it can be attached to the rifle or around the wrist. Holds two cartridges of different or identical calibers.

DVD/VIDEO
Accurate shooting – correct hunting
Blaser's new action-packed film "Accurate shooting – correct hunting" is a gripping and informative documentary that offers 55 minutes of practical hunting advice. Filmed by the popular documentarian Horst Rohleder, it clearly shows how technical conditions impact shooting accuracy.

Discover the correct way to control and test fire your hunting rifle. Learn how to adjust the reticle of the scope and to calculate the straight line distance to the target. Get tips on how to aim from different positions and dramatically increase your accuracy. Find out everything you need to know when shooting with over and under rifles. All this information – and much more – is critical to shooting success and not to be missed!

Available on DVD or Video!

On the path to success, on the way to experience

- Inspiration** Everything we develop for you, from hunting rifles and equipment, to hunting apparel, is well thought out, ultimately with an eye to your success. But that's not all. It's the adventure you embark on that inspires us. The motivating force which drives you out early into the day, your perseverance, the suspense and excitement of the hunt, the sheer pleasure of nature along with the challenges, together fuel our inspiration to continually develop better products to gratify your passion.
- Freedom** As all aspects of your hunting freedom are of paramount importance to us, we place great value on our rifles being light-weight and easy to manage. For your hunting apparel, we strive for freedom of movement which, whilst providing a pleasant body climate and protection from the elements, also guarantees the wearer greater scope and stamina in the enjoyment of the hunt.
- Intuitive Style** Blaser products are renowned for meeting the strenuous demands imposed on them by every challenging hunt, be they textiles, or made of wood and metal. And with each design, we present a clear, professional style, bearing the hallmark of carefully considered functionality with elegance and flair.
- Trends** Our hunting experts and designers have further developed the programme, acting on suggestions, or ideas of their own, as well as paying attention to new trends. Yet many outfits from last year's collection are again proving themselves worthy to appear in the Autumn collection, sporting moderate alterations and improvements in the cut or choice of material.

LOADED

CDP – Controlled Deformation Process.

Upon impact, the CDP-bullet rolls up in a controlled manner, mushrooming symmetrically in four directions, irrespective of velocity and target resistance. This effect was obtained through innovative design and precise calculation of the individual components of the bullet and their behaviour during the shot.

During mushrooming, the diameter of the bullet multiplies by 2.5 of its original caliber, while the weight remains virtually the same. Hence, the CDP-projectile achieves a high shock effect and a large penetration force at a low bullet weight. This produces an exit wound, and spares the game to the highest extent possible.

Extensive testing in the fall of 1999 showed the following results:

- in 78 % of shootings, fleeing distances measured from zero to less than 20 meters
- in 94% of shootings, over two thirds recorded very low game devaluation.

Selection of Calibers

Bullet weight	Caliber

Blaser Ammunition is not offered and distributed in the United States of America.

NOSLER ACCUBOND™ PRECISION AND PERFORMANCE

The combination of Nosler high-performance AccuBond bullet, Norma progressive manufacturing technology and leading Blaser WSM caliber rifles is a real boost to hunters shooting strong game at long range.

The flawlessly aerodynamic bullet uses the best materials, has the ideal center of gravity and profile and boasts the orange-colored, polycarbonate "ballistic tip".

Its jacket and core are bonded in a complex thermochemical process that prevents separation of the core from the jacket.

Controlled expansion under any conditions means optimum energy transfer and impact at all times.

Manufactured by **norma** in cooperation with **Blaser**

The big caliber. 45 Blaser for driven hunts

Today, hoofed game comprises mostly wild boar and deer, and is frequently shot on driven hunts.

The typical short to medium ranges require a special choice of caliber that will bring down the animal and not be impeded by obstructions in the trajectory. This is every bit as important as sparing the game as much as possible.

Together with the ammunition manufacturer W. Romy, Blaser has revitalized the classic .45 caliber. The .45 Blaser cartridge with its semi-jacketed (SJ) 22.7 g round nose (RN) bullet meets all the requirements of driven hunting.

R 93 Semi Weight in .45 Blaser

The R 93 Semi Weight barrel is predestined for the .45 Blaser caliber.

A system with an exchangeable barrel designed for standard calibers renders a second breech chamber superfluous. The diameter of the .45 Blaser cartridge head has been tailored to the specific size.

.45 Blaser caliber ballistic data (11.7x55)

Blaser Ammunition is not offered and distributed in the United States of America.

A closed unit: firearm and rifle scope

Original Blaser saddle mount

In 1993, Blaser developed and patented a perfect optics mount solution that soon replaced all others in the Blaser range. It was called the saddle mount.

All Blaser rifles come equipped for the saddle mount. No further adjustments are necessary. Two inconspicuous notches in the barrel hold the one-piece base. Removing the scope together with the mount and repositioning it on the barrel takes no time.

Once it has been adjusted, the rifle scope can be detached and replaced as often as

required without any loss of accuracy. The saddle mount also facilitates the exchange of rifle scopes.

The mounting device does not spoil the appearance of the rifle, nor does it disturb the swinging of the barrels. When shooting without a scope, there is no interference from the mount socket.

The Blaser saddle mount is suited for rifle scopes with or without rail.

SADDLE MOUNT

Rifle scopes

We always have a large selection of rifle scopes in stock.

Blaser

ACTIVE ALL OVER THE WORLD

Our distributors and dealers are happy to offer advice. Simply visit the Blaser specialist near you, pick out your preferred firearm, and test its balance, operation and huntability for yourself.

In Germany and Switzerland we supply directly to qualified dealers whose staff are trained by Blaser experts. We also work closely with sales partners worldwide, each of which directly supplies a network of authorized dealers. Simply send an e-mail to info@blaser.de or a fax to (+49) (0)7562-702-343 for information about Blaser partners in your area.
